

『Dear Nurses, we understand that it is not easy to attend to patients' toilet needs』

NOW

It is not easy to clean patients after their bowel movement

Viruses spread to the floor along with water splashes from bidet
This will lead to spread of germs!

Very challenging for patients to use the bidet alone

FUTURE

If you choose to use 『Tokyo Sukkiri』

Patients only have to sit down on the toilet seat
Just a turn on the knobs will do for Nurses
Only two steps, cleaning is done!

No spreading of viruses
Dry toilet floor
Germs do not spread!

It would be easier for patients to attempt to empty their bowels alone
